Chapter 01

Introduction

Dr. Steffen Herbold herbold@cs.uni-goettingen.de

> Introduction to Data Science https://sherbold.github.io/intro-to-data-science

Outline

- Introduction to Big Data
- Data Science and Business Intelligence
- The Skillset of Data Scientists
- Summary

Naive Definition

- Naive definition:
 - Big data only depends on the data size
 - 1 Gigabyte? 1 Terabyte? 1 Petabyte?
- Naive interpretation misses important aspects
 - Time:
 - Analyzing 1 Gigabyte of data per day is different from analyzing 1 Gigabyte of data per second
 - Diversity:
 - Analyzing spread sheets with numeric data is different from analyzing Web pages that contain a mixture of text and images
 - Distribution:
 - Analyzing data from a single source is different from analyzing data from multiple sources

Definition of Big Data

• Following Gartner's IT Glossary:

- Big data is high-volume, high-velocity and/or high-variety information assets that demand cost-effective, innovative forms of information processing that enable enhanced insight, decision making, and process automation.
- The three Vs
 - Volume
 - Velocity
 - Variety

Some people actually use 10 Vs to define big data! • Variability • Veracity • Validity • Vulnerability • Volatility • Volatility • Visualization • Value

Introduction to Data Science https://sherbold.github.io/intro-to-data-science

The 3 Vs: Volume

Scale of the data must be "big"

- No clear definition
- "that demand [...] innovative forms of information processing" (Gartner)

Data center storage worldwide

https://sherbold.github.io/intro-to-data-science

The 3 Vs: Velocity

- Speed at which new data is created
- Speed at which data must be processed and analyzed
 - Often close to real-time

The 3 Vs: Variety

Diversity in data types and data sources

- Data with defined types and structure
- Example: comma separated values
- Textual data with parseable pattern
- Example: XML files with schema
- Textual data with erratic formats that can be formated with effort
- Example: Clickstream data
- Data that has no inherent structure, often with multiple formats
- Example: Web site, videos

Introduction to Data Science https://sherbold.github.io/intro-to-data-science

Examples for data types

Structured

Quasi-Structured

Outline

- Introduction to Big Data
- Data Science and Business Intelligence
- The Skillset of Data Scientists
- Summary

Defining Data Science

- Unfortunately, there is no clear definition (yet?)
- Goal is the extraction of knowledge from data
- Combination of techniques from different disciplines
- Scientific principles guide the data analysis

What is "Data Science"?!?

Tools? Big Data? Machine Learning?

Mathematical Aspects

Computational Geometry

Optimization

Stochastics

Social Networks

Data Science vs. Business Intelligence

- Business Intelligence (Gartner IT Glossary)
 - [...] best practices that enable access to and analysis of information to improve and optimize decisions and performance.

https://sherbold.github.io/intro-to-data-science

More Data \rightarrow More Opportunities

Outline

- Introduction to Big Data
- Data Science and Business Intelligence
- The Skillset of Data Scientists
- Summary

What are Data Scientists?

- Not computer scientists
 - But should know about databases, data structures, algorithms, etc.
- Not mathematicians
 - But should know about optimization, stochastics, etc.
- Not statisticians
 - But should know about regression, statistical tests, etc.
- Not domain experts
 - But must work together with them

Skills of Data Scientists

A bit of everything

... but actually as much as possible of everything

Different types of Data Scientists

- According to Microsoft Research:
 - Polymath
 - "Do it all"
 - Data Evangelist
 - Data analysis, disseminating and acting on insights
 - Data Preparer
 - Querying existing data, preparing data for analysis
 - Data Shapers
 - · Analyzing and preparing data

- Data Analyzer
 - Analyzing data
- Platform Builder
 - Collect data and create infrastructures
- Moonlighters (50%/20%)
 - "Spare time" data scientists
- Insight Actors
 - Use the outcome and act on insights.

Miyung Kim, Thomas Zimmermann, Robert DeLine, Andrew Begel: Data Scientists in Software Teams: State of the Art and Challenges, IEEE Transactions on Software Engineering (Online First)
